Access Management

Invite team members to work with your data. Click on Invite Users below and give them right level of access by selecting appropriate role.

Create a bucket

Learn about resiliency, location and storage class while creating a new bucket

Explore →

Resiliency

Select the best resiliency option for your data with the protection and access you require. Choose "Cross Region" to store your data

Location

Select a location where you would like your data to be physically stored.

Class

Select storage class based on how often you expect to read the stored data. Choose "Standard" for active workloads. Ideal for data that

Buckets

Buckets serve as containers for objects, and can be individually configured in terms of their location, resiliency, billing rates, security, and object lifecycle rules.
